

FEEL THE PULSE OF FERRARI—  
FROM ANYWHERE

Stay updated on  
your Ferrari's  
performance and  
health, track it with  
GPS, and enjoy  
exclusive Ferrari  
owner content.

**Battery Monitoring**

Instant updates on your  
high-voltage battery  
status and the available  
range of your hybrid  
Ferrari can help you  
plan every journey with  
confidence.

Ensure the battery  
is always sufficiently  
charged for the optimal  
app connection with  
your vehicle.

how to keep your hybrid vehicle in peak condition.

FERRARI HYBRID  
CHARGING

Whether away or at home in the privacy of your garage, proper charging is essential to preserving the excellence and longevity of your Ferrari plug-in hybrid vehicle.

By following these guidelines, you'll maintain optimal battery health and ensure your Ferrari is always primed for the road ahead.

## PARKING WITHOUT ACCESS TO CHARGING EQUIPMENT

**The vehicle must remain charged at all times.**

If you plan to park your vehicle unconnected to charging equipment, please ensure the battery has sufficient power. If the battery runs low, connect to a charger promptly to prevent critical discharge levels.

## CHARGING WITH THE GAS ENGINE

Switch e-Manettino to **Qualifying** mode 30 minutes before parking to boost the charge. Drive calmly, avoiding full engine power, and the Ferrari gasoline engine will recharge the vehicle's high-voltage battery.

## PARKING FOR AN EXTENDED TIME

When parking for longer than two weeks, please enable **Long Parking Mode**. The system automatically manages battery levels to maintain the ideal charge and prevent premature battery aging.

### Activation Steps

- ① Select **SETTINGS** on the dashboard
- ② Select **CAR**
- ③ Select **LONG PARKING MODE**

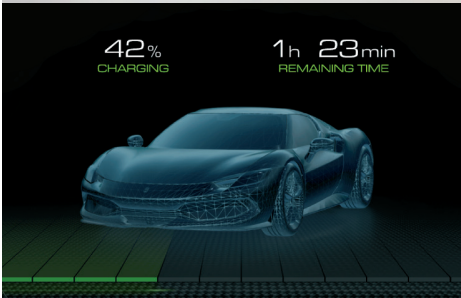

## HOW TO CHARGE

Please note, charging procedures are the same for both service and standard wall sockets.

### Connect the Charger

- ① Plug the cable into the electrical outlet and insert the connector firmly into the vehicle charging port.
- ②  Confirm the lights on the charging equipment are illuminated.
- ③  Check the green symbol and status on the vehicle dashboard to monitor charging progress.
- ④ Lock the vehicle using the key fob.

### Disconnect the Charger

- ① Unlock the vehicle using the key fob.
- ② Disconnect the charger from the charging port.
- ③ Unplug the charger from the electrical outlet.
- ④ Close the charging flap.

**IMPORTANT:** Do not use extension cords, power strips, or multi-socket adapters with the Ferrari charging system.
